## Gates

Unknown macro: {fontsize}

**Gates** allow teachers to create *Stop Points* during a sequence.

These Stop points halt the progress of learners through a sequence, until certain outcomes have been achieved.

There are several types of gates:

- **Permission Gates** require a monitoring teacher to manually open the gate before Learners can pass through.
- **Synchronise Gates** require all learners actively participating in the sequence to reach the gate before it opens.
- **Schedule Gates** open at a specified date and time. Since LAMS 2.1, Schedule Gates can be opened ahead of schedule. [Click here to see how \(Animation\)](#).
- ★ **NEW Condition Gates** allow a gate to open based on the outputs of a previous activity. Currently, [these activities](#) provide output conditions.

**Click the Headings Below to view instructions for using Gates in sequences.**
