

Cognitive Skills Wizard

Q&A Cognitive Skills

The Q&A question wizard helps authors choose "right" type of question to ask learners. The Q&A question wizard provide authors with a tool for promoting higher-order learning to engage learners in the learning process. Authors can use any preferred taxonomy for categorizing level of abstraction of questions.

The administrator of a LAMS server configures and enables the wizard. When the author want to create a new question the Question Assistance could be used to choose a category and then the second menu will display the cognitive skills of this category. After the author selects a cognitive skill, he'll be presented with a question template you he selects a template of question.

Taxonomy provides a useful structure in which to categorize questions. Since into a lot of activities will characteristically asking/posing questions within particular levels, and if author can determine the levels of questions that will appear on his activities, learners will be able to study using appropriate strategies to develop all their thinking skills from lower-order to higher-order knowledge.

Creating Questions based on Cognitive Skills
