

LAMS Server Versions

The LAMS server versions use the following naming convention:

- x.y.z releases are minor changes. This includes emergency fixes, bug fixes and minor enhancements.
- x.y releases are major functional changes. This will include adding new features to LAMS, in addition to some bug fixes and minor enhancements.
- Releases with a RCn suffix are release candidates. These are not intended for production release.

For example:

- 2.0 is the first production release for LAMS 2.0.
- 2.0.1 will be a mix of bug fixes and minor enhancements such as restricting the size of a file that a learner can upload.
- 2.1 will be contain significant functional changes such as branching.
- We may have a test release for v2.1, so that people can try out the new functionality on **test** servers before the functionality is finalized. If we do test releases then they will be marked 2.1RC1, 2.1RC2, etc.

[Individual tools also have their own versions.](#)
